DETAILED ACTION

Claims 1, 3, 5-7 and 13-17 are pending in the instant application, appear allowable over the prior art of record and are renumbered as claims 1-10. Claims 2, 4, 8-12 and 18-21 are cancelled below by the examiner's amendment and claim 16 is amended to add correct punctuation and correct the claim dependency.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jerald Meyer on 11 September 2003.

The application has been amended as follows:

1. Cancel claims 2, 4, 8-12 and 18-21.
2. Amend claim 16 to read as follows by adding a period at the end of the sentence after the structure and changing the dependency from "5, 7 or 8" to --7, 14 or 15--:

16. (currently amended) The method according to any one of claims 7, 14 or 15 wherein said compound is

3. Amend page 19 of the instant specification, beginning on line 6, by inserting the following:

Brief Description of the Drawing

Figure 1: The actions of a compound of the invention as an antagonist of PI hydrolysis evoked through the mGluR1 receptor by 10 μM (L)-Glu.

Drawings

The drawings were received on 24 June 2003. These drawings are acceptable.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance. This invention relates to cubane compounds of the formula (I) as found in claim 1, their methods of preparation and their methods of modulating one or more metabotropic glutamate receptor functions to treat certain neurological diseases or disorders and certain

psychiatric diseases or disorders. Support for the modulation of one or more metabotropic glutamate receptor functions is found on pages 17 and 18 of the instant specification which discloses that the compounds of the invention can block the increase in PI hydrolysis by an action at the mGluR1a receptor. Support for the treatment of the specifically claimed neurological and psychiatric diseases and disorders can be found on pages 3 and 4 of the instant specification which discloses the correlation between modulating metabotropic glutamate receptor functions and neurological and psychiatric diseases and disorders, for example, page 3 of the specification discloses:

Trans-ACPD has been shown to increase release of dopamine in the rat brain, which indicates that compounds acting on the mGluRs might be usable for the treatment of Parkinson's disease and Huntington's Chorea (Sacaan et al., J. Neurochemistry 59, 245, 1992).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
